

## Interoffice Memo

**DATE:** September 24, 2020

**FROM:** Monica L. Flourney, P.E., State Materials Engineer  
Office of Materials and Testing

**TO:** Christopher Rudd, P.E., State Design Policy Engineer

**SUBJECT:** Roundabout Traffic for Pavement Design

In coordination with the Office of Planning, a tool has been created to expedite the approval of pavement designs when the current approved traffic diagrams do not contain circulatory flow traffic.

When submitting a Pavement Design Package or Pavement Evaluation Summary for approval output from the [Roundabout Traffic Tool for Pavement Design](#) may be included with the existing traffic diagrams when they do not contain the circulatory flow traffic.

This tool is only for use in pavement designs and does not supersede any other Office's requirements for approved traffic diagrams to contain circulatory flow traffic.

If additional information is needed, please contact Ian Rish, P.E., of the Pavement Management Branch at 404-608-4849.
